

Productivity, Time, and Compliance

WorkMax By Foundation Software

- Automate Daily Reports
- All in One Field Reporting
- Increase Profit, Estimate, and Schedule Accuracy
- Keep Projects On Budget, On Time
- Manage Change Orders
- Coordinate Resources
- Stay on Track
- Collect Earned Completion - Quantity and Percent Complete

Project teams leverage in-depth insight and future visibility into labor, material and resource planned and actual productivity.

Progress is measured on hours, units, and scheduled completion dates. Real time productivity empowers project managers, schedulers, finance and other project stakeholders with live site information to reduce risk and improve profits immediately.

Automate Daily Reports

Manage daily site activity including - Progress, Units, Time, Observations, Workers Inducted, Equipment Inducted, Incidents, Injuries, Meetings, Pre-Task Plans. Collect and view progress and productivity across multiple projects.

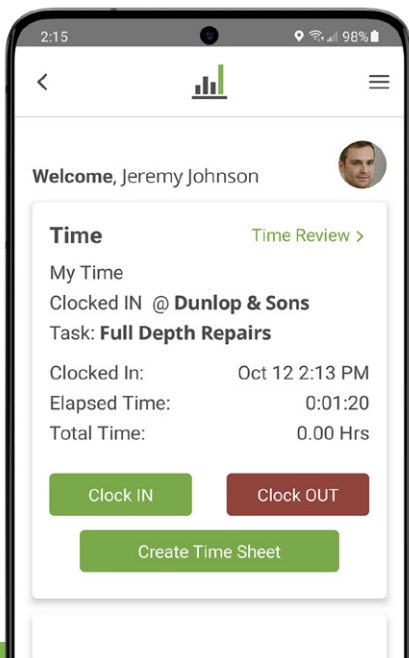

Increase Profit, Estimate, and Schedule Accuracy

Build better bids and estimates with past, present and forecasted field production rates. Real-time hours, units, and quantities from the field calculate planned vs. actual field earned value keeping schedules and estimates on track.

All in One Field Reporting

Record notes for each activity including: assumptions, meetings, jobsite observations, productivity and more. Increase communication and provide additional information that enables field operators to prevent staging and other issues.

“We can start sourcing parts right away without having to lose pictures or try and cross reference information. And then that data is stored for that job. So when we have to order it again in the future, it’s already there.” Melissa Kastle, Executive Elevators

Keep Projects On Budget, On Time

Empower teams with real-time information across projects. Reduce change orders. Stay ahead of critical path schedule items and updated schedule baselines with inspection alerts on critical path items. Expedite communication to schedulers, planners and project stakeholders with leading indicators.

Manage Change Orders

Simplify change order management. Eliminate excel and paper processing. Leverage change order documentation and control with metrics and reporting on a single platform. Collaborate with all stakeholders including subcontractors. Include durations, costs, time, units, CO numbers, net changes, project details, acceptance signatures and more.

Coordinate Resources

Simplify resource management by assigning actual labor and equipment as specified in planning, estimating, and scheduling. Assign cost codes to tasks for easy progress, to plan comparisons.

“If I could name one thing that WorkMax has done, it has streamlined our processes in order for us to save time on our job site so that we can put that towards production.

Brooke Redden, Redden Concrete

“I know exactly what I need, let me put it in this form, submit it in, and then, boom, I don't have to worry about it from there because my purchasing director is able to take care of it. It eliminated... lots of back and forth and all of that is time and time equals production.” Brooke Redden, Redden Concrete

Stay on Track

Track quantities of material installed to keep your field teams productive and projects on schedule. Turn field data into actionable insights to competitively bid on future projects.

Collect Earned Completion - Quantity and Percent Complete

Track planned quantities, man-hours, and equipment hours against actual quantities, man-hours, and equipment hours complete. Quantities can auto-calculate percent complete or percent complete can be entered directly. Integrate with scheduling to drive percent complete and keep progress and schedule in sync while providing visibility across the enterprise.

Integrations

ERP, Schedule, Estimating, Project Management, Real Time Location Systems
